

## Kamm, McKenzie 3D/4D Ultrasound

Our priority at Kamm McKenzie OB/GYN is to provide you with outstanding obstetric care during your pregnancy, and assure the health and well being of you and your baby. While most uncomplicated pregnancies only require two ultrasounds (a first trimester ultrasound to confirm your due date and an anatomy ultrasound at 18-19 weeks), we are excited to offer you the option of an additional 3D/4D ultrasound at 26-30 weeks gestation. Because this 3D/4D ultrasound is for enjoyment purposes, it is not covered by insurance. This service is only offered to our patients.

Our 3D/4D ultrasound begins with a complete evaluation of your baby's growth with an estimated fetal weight, amniotic fluid index, placenta assessment, and check for presentation. Next, using our state of the art GE Voluson E8 ultrasound machine, our experienced sonographers will capture 3D/4D images of your baby. We may be able to catch your baby open their mouth, yawn, or even open their eyes! Our sonographers are registered in OB/GYN and have over 30 years of experience in evaluating prenatal patients.

3D/4D ultrasound may be performed at any time, but the best images are taken between 26-30 weeks gestation because of fetal size, body fat, and amniotic fluid volume. Please keep in mind that we will do our best to ensure quality 3D images are taken of your baby, but given limitations with fetal position, placental location, maternal size, and amniotic fluid, image quality can be impacted. Thus, no refunds or return visits are offered.

**If your BMI is greater than 35, 3D image quality is limited and therefore, discouraged.**

Our 3D/4D Ultrasound Package is \$155 and includes the following:

- 30 minute ultrasound session
- Estimated fetal weight, measurement of amniotic fluid index, placenta assessment and presentation evaluation
- 8-10 3D/4D photos of your baby

If you are interested in scheduling a 3D/4D ultrasound, please arrange to have this ultrasound performed between your 26<sup>th</sup> and 30<sup>th</sup> week of pregnancy. It is best to schedule this appointment early, an ideal time to set up your appointment date would be at your 18-19 week anatomy ultrasound or a routine OB visit before 26 weeks of pregnancy. The ultrasound room will accommodate up to 4 guests.
